

# Create a Plant

New types of plants are discovered all the time due to the amount of biodiversity on planet Earth. While many of these plants are similar, each is very unique in its own way. Plants each have their own special adaptations that allow them to survive wherever they are found. Some plants have very bright colored flowers, and some don't have flowers at all. Some plants have huge leaves to capture all the sunlight they can, others grow tiny leaves. Some plants grow tall like trees, and others grow close to the ground.

For this activity, you will design your own plant! Start by drawing a picture of what your plant looks like on the following page. Include any flowers and specific colors your plant has. Click the link below to learn about different plant adaptations your plant might have!

Answer the following questions about your plant:

What is your plant's name?

---

---

---

What are your plant's basic needs?

---

---

---

What type of environment does your plant live in?

---

---

---

What adaptations help your plant survive?

---

---

---
